

Find the face that fits! Education Recruitment Software

Before FACE-Ed we were using a recruitment system that was not built for the education sector. The refreshing thing about FACE-Ed is that it is bespoke to the sector and it is logical to use. The way it tracks compliance and vetting is far superior. The support from the team is also amazing.

As a large Multi-Academy Trust, FACE-Ed has enabled us to track live campaigns right across the Trust and also to provide schools with the ability to be involved. The approval process makes budget sign off auditable and the ability to create application packs for shortlisting / interview panels saves an immense amount of time.

Being able to look at our systems as one with FACE-Ed linking to SAMpeople and then to SIMs creates a single-entry point, reducing time and improving the accuracy of records. This also supports dashboard data analysis as all issues are visible in one place. Having the data supports our recruitment strategies and enables us to have a more targeted response.

FACE-Ed has helped us meet and track Safeguarding requirements, it ensures compliance for every new starter through the tracking of document return and validation.

Our team are already seeing the benefits. Management of high-volume recruitment and application/candidate management is much smoother and quicker. It means we are providing an improved candidate experience from application to onboarding.

The team behind FACE-Ed have an excellent understanding of customer care and that makes this organisation stand out in the market.

Linda Gregory, People & Organisational Development Director, E-Act
